WELCOME TO ANDELS.NET
- LIGHTNING FAST AND UNCOMPROMISING
STABLE INTERNET

Dear resident in Glentevej 10

Our professional technicians have now finished establishing lightning-fast internet (1000/1000 Mbit/s) in your apartment, and you can connect your equipment, for example your computer and router, to the internet socket in the wall.

Your housing association has entered into a collective agreement with Andels.net. This means that you are guaranteed the market's best internet solution at the best price. The low price for the internet connection is automatically paid over your rent.

You can easily and quickly get online by following these 3 steps:

1. Connect your router to the internet socket installed in the wall in your apartment
If you don't have a router, you can connect your computer and the plug in the wall with an ordinary network cable - and in that way make use of the Internet connection.
You can rent a quality router for DKK 35/month by ordering here:
https://andels.net/product.php?id=27
You are also very welcome to use your own router, see here what we recommend or ask support for guidance: https://andels.net//wifi.php

2. Take your device, e.g. your computer and find the wireless network.
If your device is plugged in with a cable, it will be connected automatically.

3. You now have access to the Internet

On our website you can find the frequently asked questions from Andels.net's users.

We are happy to advise you free of charge on how to get the most out of your internet connection.

You are welcome to contact us at support@andels.net or 36 92 62 32 if you need it.

Enjoy your new, lightning-fast internet.

Yours sincerely

Andels.net
